

# NIC PARTNERS PHYSICAL & NETWORK SECURITY ASSESSMENTS

What's Happening In Your Infrastructure?

## HAVE THESE CONCERNS?

1. Infrastructure performance as compared to requirements or benchmarks
2. Infrastructure readiness related to new software applications or use cases
3. Realizing the business benefit of your technology investments

## LET NIC PARTNERS HELP YOU

A NIC Partners Engineer will evaluate your current wireless infrastructure, assess mobility requirements and analyze wireless discovery - this will reveal any gaps and determine the next-generation wireless solutions. If the assessment identifies areas of concern, we'll document the holes and create an action plan to help you realize the benefits of your technology investments.

We offer baseline, wireless and video surveillance assessments to solve shortcomings in your infrastructure.

## BASELINE NETWORK ASSESSMENT

A NIC Partners baseline network assessment is crucial in uncovering the gaps in your infrastructure. It creates a foundation for managing your infrastructure and finding any issues.

### The baseline assessment includes the following:

- Collection of SNMP information via a sniff assessment tool
- Provide a comprehensive report on equipment for End-Of-Life status, SMARTnet or license coverage, and security vulnerabilities
- Provide drawing(s) of your network topology
- Compare network-recommended specifications to your current network status

### Benefits of completing a baseline network assessment:

- Identify network vulnerabilities and threats to the network
- Ease in managing future network adds
- Ability to manage your budget efficiently
- Know when to refresh and migrate your network equipment
- Peace of mind

## WIRELESS NETWORK ASSESSMENT

A NIC Partners wireless network assessment measures the performance of the existing wireless network and characterizes it for signal strength, bandwidth, latency, and noise level.

### The wireless assessment includes:

- Pre-installation walk and planning module survey
- Assessment of coverage
- Assessment of performance
- Provide a comprehensive report on equipment for End-Of-Life status, SMARTnet or license coverage, and security vulnerabilities and issues
- Provide drawing(s) of your network topology

### Benefits of completing a wireless network assessment:

- Identify network vulnerabilities and threats to the network
- Ease in managing future network adds
- Ability to manage your budget efficiently
- Know when to refresh and migrate your network equipment
- Peace of mind

## VIDEO SURVEILLANCE ASSESSMENT

A NIC Partners wireless network assessment measures the performance of the existing wireless network and characterizes it for signal strength, bandwidth, latency, and noise level.

### We follow these steps when implementing an assessment:

1. Our Certified Engineer will come to your facility to review your technology objectives and perform the baseline assessment.
2. We will document your infrastructure based on the information gathered, detailing your hardware/software and associated coverage.
3. You'll receive our comprehensive wireless assessment report detailing gaps and recommendations for coverage, repairs, modifications, or additions.

## YOUR SUCCESS IS OUR BUSINESS

NIC Partners is a technology integration company providing unified communications equipment and services to Southern California schools and hospitals.

We exist to help our customers understand, implement and leverage technology.

NIC Partners is an employee-built and employee-owned company (ESOP).
